

1. CLINICAL OVERVIEW

Patient presents with **Brain** (). The current clinical status and molecular profile indicate a **HIGH RISK** profile, requiring the following therapeutic intervention.

PATIENT NAME	MEDICAL RECORD NUMBER	CLINICAL RISK LEVEL
David Wang	MR-2026-8820-W	HIGH
GENDER / AGE	DIAGNOSIS DATE	WHO GRADE
male / 68	10/2/2026	IV
PRIMARY DIAGNOSIS	HISTOLOGICAL SUBTYPE	
Brain		
CLINICAL STAGE	WHO GRADE	
—	IV	

PRIMARY CLINICAL RECOMMENDATION

{ "RATIONALE": "SELECTED BASED ON AGE-COHORT OPTIMIZATION AND STANDARD OF CARE GUIDELINES FOR BRAIN LOCALIZED CANCER", "TREATMENT": "HYPOFRACTIONATED RT (40GY/15FX) + TMZ (PERRY REGIMEN)" }

CLINICAL RATIONALE & EVIDENCE BASIS

- { "mri_analysis": { "available_scans": ["T1CE", "T1", "T2", "FLAIR"] }, "patient_profile": { "age": 67, "cancer_type": "brain", "kps": null, "stage": "LOCALIZED" }, "vcf_analysis": { "actionable_variants": 3, "key_markers": { "IDH1": "Mutated", "PTEN": "Lost", "TP53": "Mutated" } } }

2. GENOMIC & MOLECULAR LANDSCAPE

TOTAL VARIANTS	ACTIONABLE MUTATIONS	VARIANTS OF UNKNOWN SIG. (VUS)	
3	3		

GENE	STATUS	CLINICAL IMPACT	TIER
IDH1	Mutated	Favorable prognosis	High
MGMT	Unmethylated	Resistant phenotype	High
IDH1	Mutated (48%)	Pathogenic (Clonal)	High

PTEN	Lost (8%)	VUS (Low Frequency)	High
TP53	Mutated (32%)	Pathogenic (Subclonal)	High

3. IMAGING & PERFORMANCE METRICS

VOLUMETRIC ANALYSIS		PERFORMANCE STATUS	
Tumor Volume	54.39 cm ³	KPS Score	50
Core Volume	43.51 cm ³	ECOG Score	3
Edema Volume	8.16 cm ³	Status	Assisted

4. PROGNOSIS & NEXT STEPS

MEDIAN OVERALL SURVIVAL

15.2 Months

QUALITY OF LIFE SCORE

76.8/100

PROGRESSION-FREE SURVIVAL

9.1 Months

TOXICITY RISK PROFILE

Monitor for fatigue and nausea

IMMEDIATE CLINICAL ACTIONS

1. Initiate recommended protocol within 7-10 days.
2. Schedule baseline MRI/CT for post-treatment comparison.
3. Monitor hematological parameters weekly if systemic therapy is initiated.
